

Is your child allergic to peanuts?

If your child is under 6 years old, this study may be for you.

<https://UMHealthResearch.org/#studies/HUM00205852>

Study for children with peanut allergy.

Our goal is to better understand how food reactions work so that we can try to predict when people will have them. We are conducting a study where people have food challenges, and we measure how their skin changes during allergy reactions. We think this will help us predict allergy reactions before they occur.

Participants will receive \$100 upon completion of food challenge.

Location

- Study sessions will be held at Domino's Farm in Ann Arbor, Michigan.

Is your child eligible?

- Under 6 years old.
- Known history of reaction to peanuts.
- Visit with allergist in last 12 months.

If you're unsure if you meet the requirements, call or email our study team.
